Zhenyi Zhang

zhenyzhang@ethz.ch

PhD Candidate in Space Geodesy, ETH Zurich

ETH Profile | Google Scholar

Education

ETH Zurich — Zurich, Switzerland

PhD in Space Geodesy — *10.2023 – 10.2027 (expected)*[1]

Institute of Geodesy and Photogrammetry Supervisor: Prof. Dr. Benedikt Soja

Thesis: Physics-Informed Machine Learning for Tropospheric Modeling

Wuhan University — Wuhan, China

MSc in Geodesy and Surveying Engineering, Distinguished Graduate — *09.2020 – 06.2023*

Thesis: Processing and Applications of High-Precision Tropospheric Products from Airborne GNSS

Wuhan University — Wuhan, China

BSc in Navigation Engineering, Distinguished Graduate — *09.2016 – 06.2020*

GPA: 3.98/4.0, rank 1/51

Research Profile

My research lies at the intersection of **physics-informed machine learning, space geodesy, and atmospheric science**. My doctoral research focuses on developing physically constrained AI models for tropospheric modeling by integrating geodetic observations, meteorological data, and physical knowledge. My broader expertise includes precise GNSS processing for ground-based and high-dynamic airborne platforms, tropospheric delay estimation and modeling, GNSS data assimilation in numerical weather prediction, and atmospheric correction for remote sensing. A major part of my work focuses on developing **global physics-constrained machine learning models** for tropospheric mapping functions, slant wet delays, and zenith wet delays by combining geodetic formulations, ERA5 atmospheric fields, and numerical ray tracing. I also contribute to the Earth System Foundation Model project, exploring the integration of GNSS-calibrated satellite observations, meteorological analyses, and other Earth-system data into AI foundation models for atmospheric water-vapor estimation and weather-related applications.

Research and Academic Activities

- Contributor to the **Swiss AI Initiative** and the **Earth System Foundation Model (ESFM)** project, working on atmospheric water vapor and the integration of geodetic, satellite, and meteorological observations.
- Supervised five bachelor and master theses/projects on GNSS meteorology, machine learning, atmospheric water vapor, and climate-related applications.
- Teaching Assistant at ETH Zurich for graduate courses *Geodetic Earth Monitoring* and *Geospatial Reference Systems*.
- Reviewer for *Journal of Geodesy*, *Journal of Advances in Modeling Earth Systems*, *IEEE Transactions on Geoscience and Remote Sensing*, *Atmospheric Research*, *Earth and Space Science*, and other journals.

Selected Honors and Awards

- National Scholarship for Graduate Students, China (top 0.2% of graduate students nationwide)
- National Scholarship for Undergraduates, China (top 0.2% of undergraduate students nationwide)
- Wang Zhizhuo Innovative Talent Scholarship, Wuhan University (8 recipients annually in surveying, geodesy, and remote sensing)
- Top Ten Youths Honor, Wuhan University (10 recipients annually university-wide)

Expertise and Other Skills

- **Expertise**: Space geodesy, GNSS data processing, Machine learning/Deep Learning, GNSS meteorology, Tropospheric modeling, InSAR data processing, radiosonde data processing, Numerical weather prediction and data assimilation, Foundation models for Earth system science
- **Languages**: Chinese (native speaker), English (fluent)
- **Programming**: Matlab (proficient), Python (proficient), C/C++ (proficient), Fortran (proficient)
